

Fluorosint® 500

Abradable Polymer Labyrinth Seal

Challenge

Improve compressor seal efficiency

Fluorosint® 500 material has been the industry standard for abradable polymer seals for over forty years. Mitsubishi Chemical Advanced Materials' Fluorosint® seals allow for superior sealing efficiency without destroying shaft labyrinth teeth.

Abradable Polymer Labyrinth Seals

Key Requirements

- Increased compressor efficiency
- Increased design capabilities
- Reduced downtime
- Lower cost in service
- NORSOK M-710 (sour gas aging) compliance for Ketron® PEEK stock shapes

Customer Benefits

- Improved efficiency and reliability in compressor seals
- Reduced chemical corrosion
- Increased seal life in fouling gas services
- Cost effective solutions, ease to manufacture

Mitsubishi Chemical Advanced Materials Added Value

- Fluorosint® 500 has continuous service temperatures up to 500°F / 260°C for compressor labyrinth seal applications
- Coefficient of Linear Thermal Expansion similar to aluminum
- High resistance to fuels, lubricants and chemicals
- Near net shapes, machining and molded parts

Deformation Under Load

Coefficients of Linear Thermal Expansion
